

PRESS KIT – Introduction

Innovation meets Polymer – Konzelmann at IAA MOBILITY 2025

IAA MOBILITY 2025 is all about the profound transformation of the mobility industry. Electrification, alternative drives, sustainability and connected technologies are reshaping demands and markets.

For the first time, **Konzelmann GmbH** will also be represented in Munich. The family-owned company and leading provider of innovative sealing solutions from Löchgau is presenting itself under the guiding principle **“Innovation meets Polymer”** – showcasing how modern polymer technology contributes to shaping the mobility of tomorrow.

This motto reflects the company’s ability to develop customized solutions for key future areas: **drive systems for electric vehicles and modern powertrains, sealing systems ranging from electrolysis to fuel cells, as well as intelligent safety solutions for battery systems.**

“‘Innovation meets Polymer’ sums up what we stand for: customized polymer solutions that support our customers in a rapidly changing industry and open new paths toward safe, efficient and sustainable mobility,” says **Milko Konzelmann, CEO and Managing Partner.**

In the additional documents within the press kit, you will find the focal points of our trade show appearance:

- Global expertise, Swabian roots – Konzelmann in portrait
- Safety Simplified – Intelligent safety solutions for battery systems
- TPU – Sustainable material expertise for the mobility of tomorrow
- “Innovation meets Polymer” – Polymer expertise that drives change

About Konzelmann

For more than 60 years, Konzelmann GmbH has stood for innovations made of plastics. The family-run company is headquartered in Löchgau, Germany, and has an office in Detroit, USA, as well. Konzelmann develops polymeric components and systems for friction optimization as well as emission reduction. Its customers are major OEMs and Tier 1 suppliers in the automotive, medical and industrial sectors. Konzelmann's experts follow a holistic approach to finding solutions: through intensive listening and many years of expertise in the development of special technical applications, individual solutions with a holistic view of product and process interfaces are created in exchange with the customer. The result is reduced production costs with superior product properties. Current examples are the [KBerstring®](#) developed in-house, which increases the safety of batteries in the course of e-mobility, our purkon®2000 material development for comprehensive leakage protection from electrolysis to fuel cells and the [ID Sealing \(REDI\)](#), which can significantly reduce both leakage and frictional torque.
