

PRESS KIT – Company Profile

Global Expertise, Swabian Roots – Konzelmann in Portrait

Konzelmann GmbH, a family-owned company headquartered in Löchgau near Stuttgart (Germany), will present itself at IAA MOBILITY 2025 for the first time. Under the guiding principle “**Innovation meets Polymer,**” the company demonstrates how customized polymer solutions make the mobility of tomorrow safer, more efficient and more sustainable.

For more than 60 years, Konzelmann has been developing plastic components and systems for friction optimization and emission reduction. Its customers include leading OEMs and Tier-1 suppliers in the automotive, medical and industrial sectors. With locations in Löchgau (Germany), Detroit (USA) and Seoul (South Korea), Konzelmann operates internationally and supports projects from prototype to series production – with in-house material development, toolmaking and validation.

The company’s philosophy is based on a **holistic solution approach**: by listening closely and leveraging decades of development expertise, tailor-made solutions are created in close collaboration with customers – taking into account both product and process interfaces. The result: reduced production costs while achieving superior product performance.

Examples of this innovative strength include the proprietary **KBerstring®**, which enhances battery safety, the material innovation **purkon®2000** for comprehensive leakage protection in hydrogen applications, and the **internally tensioned rectangular sealing ring (REDI)**, which significantly reduces leakage and friction torque.

“The mobility of the future will only be successful if we combine functionality, efficiency, and sustainability. That is exactly what we stand for with our polymer expertise and our guiding principle ‘Innovation meets Polymer,’” says **Milko Konzelmann, CEO and Managing Partner**.

With its debut at IAA MOBILITY, Konzelmann underscores its role as a partner for the mobility of tomorrow – with customized solutions that unite ecology and economy.

About Konzelmann

For more than 60 years, Konzelmann GmbH has stood for innovations made of plastics. The family-run company is headquartered in Löchgau, Germany, and has an office in Detroit, USA, as well. Konzelmann develops polymeric components and systems for friction optimization as well as emission reduction. Its customers are major OEMs and Tier 1 suppliers in the automotive, medical and industrial sectors. Konzelmann's experts follow a holistic approach to finding solutions: through intensive listening and many years of expertise in the development of special technical applications, individual solutions with a holistic view of product and process interfaces are created in exchange with the customer. The result is reduced production costs with superior product properties. Current examples are the [KBerstring®](#) developed in-house, which increases the safety of batteries in the course of e-mobility, our purkon®2000 material development for comprehensive leakage protection from electrolysis to fuel cells and the [ID Sealing \(REDI\)](#), which can significantly reduce both leakage and frictional torque.
